

Panasonic

LOGISCEND SYSTEM

Asset Tracking Application

- Know where your assets are in real time, count them, and record their status and attributes. The Panasonic Logiscend Asset Tracking Application ensures you know where assets are at any point in the process.

Asset Tracking Application

Knowing what components or assets you have — and where they are — is a fundamental necessity in every factory. The Asset Tracking Application of the Panasonic Logiscend System allows you to track the location of assets, count them, and record their status and attributes.

- Track asset location and disposition
- Easily import list of assets and locations
- Set alarms or events for activity or maintenance
- Track and report asset history and management
 - Downloadable reports into .xls format or view in window
- Compatible with fixed or handheld readers
- Enroll assets, take inventory or locate assets in the field and sync with main application
- Highly scalable application, expand for multi-location or multi-user capability
- High accuracy Real Time Location System (RTLS) with Bluetooth Low Energy (BLE) tags
- Create your own geo-fences and work zones to enable optimized tracking and triggering of automated workflows

The Logiscend Difference

What makes Logiscend different than other Asset Tracking applications? It's simple — our Asset Tracking Application allows you to not only track your assets with the location accuracy you require but provides you with the reporting and documentation you require to maintain your assets — as well as their records — to ensure compliance.

Customize & Configure

- Fully configurable location and asset attributes
 - Nested parent-child relationships
- Easily adapted to your branding colors/schemes
- Easily set user roles and access
- Data can be segmented based on group/department to assure secure data access.

Scalable

- Import assets, set locations and connected devices
 - One location to multiple sites
- Move and copy definitions for easy setup
- Secure socket implementation
- Support thousands of assets with a single Logiscend Asset Tracking application

Mobility

- Commission and associate RFID & BLE tags
- Location ID
- Inventory workflow
- RFID locator function

Customize Reports and UI

- Export data to .xls to sort
- Utilize formatted reports such as assets by location or assets moved from one location to another
- Configure maps and geo-fenced locations to enable customized monitoring of assets and manufacturing workflows

Open architecture

We will work with you to design the right tag solution for your application. The Logiscend software supports multiple industry standard RFID protocols including:

- EPC RFID Protocols Gen-2, ISO 18000-63
- RAIN RFID (UHF)
- Bluetooth Low Energy (BLE)
